Tree shade comparison · Bellevue → Zürichhorn

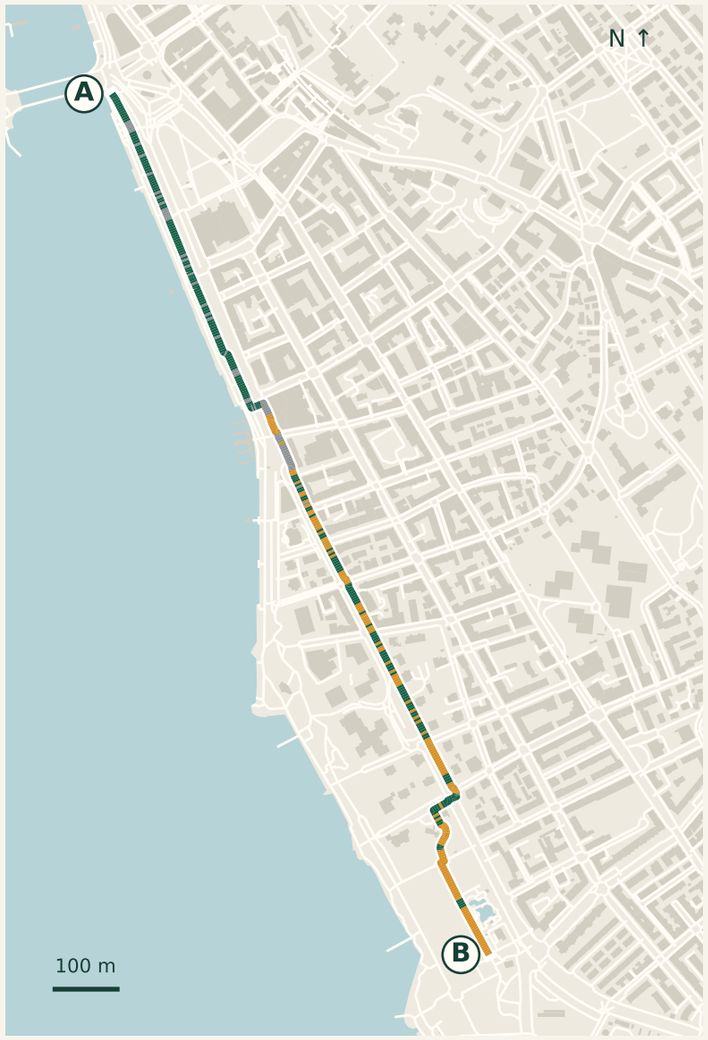

1 August 2024, 16:00 CEST interpretation · 457 fixed points on the same 1.594 km path

Route choice

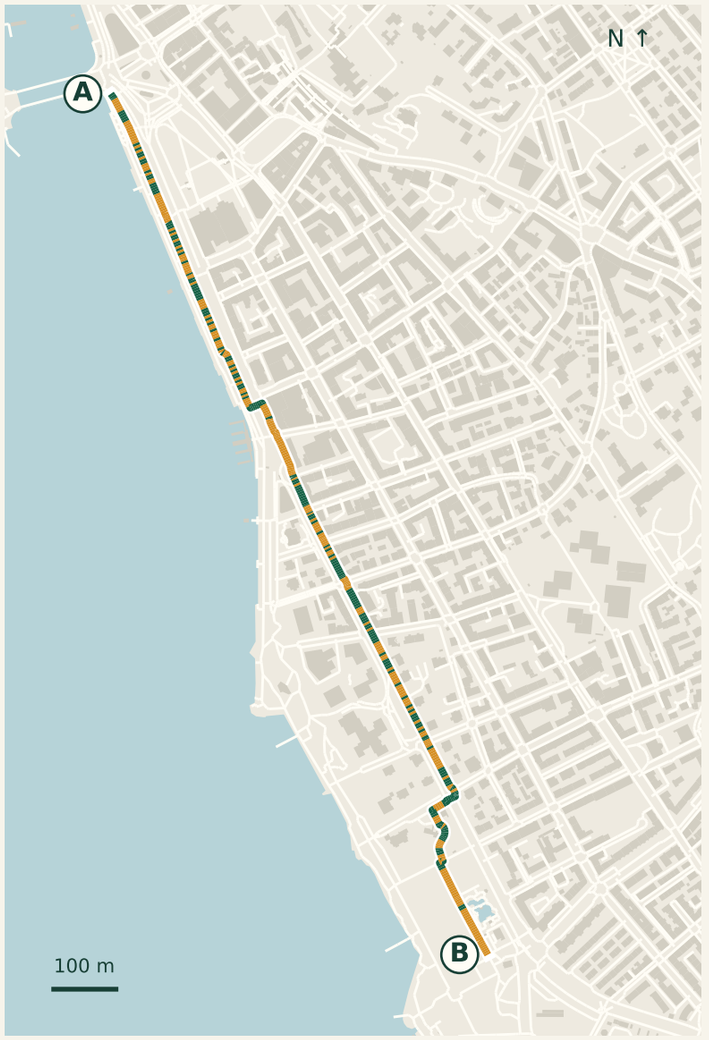

Tree mode: fastest, 1,594 m
Live Vampire result, 1,573 m
Buildings-only detour, 1,964 m

Cooler Walks: buildings + trees

Shade Sun Unknown

Published Vampire raster

Shade Sun Unknown

On the same 87% of the path: 59% potential shade in our tree scenario; 45% in the published raster.

Sun/shade agreement: 59% (buildings alone: 56% on that same portion). The remaining 13% is unknown in our tree model.

Model comparison, not field accuracy. Vampire's deployed raster and time convention are unresolved.

Our tree mode shows the fastest route because coverage is insufficient for a shade recommendation.
